I'm a Software Developer with a mix of theoretical and practical training in programming and web development. I'm most comfortable in Ruby on Rails and JavaScript, but I enjoy learning new languages and frameworks to use whatever technology best solves the problem at hand.

As a developer I am organized, detail-oriented, and excited to tackle new challenges. With my background in customer service I bring a people oriented approach to problem solving and working in teams. I'm interested in a position where I can continue to grow, and hone my craft as a developer, and help teach my skills to others.

Skills

LANGUAGES
Ruby
JavaScript
HTML
CSS

FRAMEWORKS
Ruby on Rails
Sinatra
Bootstrap

TESTING
RSpec
Capybara
Minitest
Chai
Mocha

TOOLS
Git
Bash
Unix
PostgreSQL
ActiveRecord

Projects

Commissions // Rails, JavaScript, JQuery

A pair project built for Trelora, a flat free real estate company. The purpose was to build a website where users can view real estate commissions on homes for sale in the Denver area. Upon creating account, users can view a google map of the Denver area with markers representing houses for sale. Clicking on a marker reveals information about the house with a link to a show page where the user can see more information.

I focused on creating an api endpoint for the homes data, and creating the google maps page to consume that API and draw markers on the map based on the data received, along with filtering those markers using JQuery.

Tiny Stay // Rails, JavaScript, JQuery

A team project practicing brownfield development by pivoting an ecommerce tool rental website into a multi tenancy Airbnb clone. Users can list homes for rent and make reservations on other homes through a JQuery date picker which only displays dates a home is available.

I took responsibility for setting up the authentication system, the reservation system, populating the date picker, and styling the site.

Which Twitch // Rails

A short solo project building a clone of Twitch.tv using the Twitch API. Users can login with their twitch account using OAuth. When logged in, users can view featured channels, browse live channels by game, see what channels they follow are live, and follow or unfollow live channels.
